(54) PRINTING SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a printing system which maintains secrecy without the need to add a device such as a key, specially, to a stacker in the print system which performs a printing process through a network.

SOLUTION: In the network to which clients 2-1 to 2-n, a printer server 3, and a printer 4 are connected, the clients 2-1 to 2-n store printing data on the printer server 3 in advance by using passwords. When the printing data need to be printed, a client (operator) operates, for example, an operation panel of the printer 4 and uses a password to read his or her own printing data from the printer server 3 to the printer 4, which prints the data. Consequently, the corresponding client obtains printed matter without fail.
